

PHASE 0 RUNBOOK v2 — tonight's video, tuned for 8 GB RAM + Intel UHD 620

Hardware rule: phone and paper do the heavy lifting; the PC is a control room only.

Tonight's target

"How to improvise at the piano in your first hour — no sheet music" (AHeadofSound #1)

Done = raw footage + artifact exist, video cut and uploaded UNLISTED. Goes live when the site page exists so the artifact link resolves. ~2.5 hrs total.

Order of the evening (matters — fresh brain on paper, tired brain on trims)

1. Pre-flight — 10 min

- Quiet room. Lamp off-axis so keys are lit evenly, no glare on black keys.
- Phone charged, storage checked, Do Not Disturb ON (one ringtone ruins take 2).
- Phone stand: stack of books is fine. Overhead-ish angle on the keys.
- A class of 8 GB rules for the whole night: Spotify off. Browser to ≤ 6 tabs. One app at a time.

2. The Artifact — 40 min (do this FIRST while fresh)

Hand-write the First-Hour Improv Sheet. One page, or two sides max:

- Left-hand rootless 7th voicing map (C and F)
 - 3 rhythm cells (write them rhythmically, don't over-notate)
 - One ii-V-I in C and one in F
 - Right-hand pentatonic boxes
- Mess is fine. Mess is the brand — the uncensored-hand rule applies to staff paper too.
- Photograph both sides → filename: brain-ingest-2026-09-13-artifact-first-hour-improv-sheet.pdf

3. Script skeleton — 20 min (paper again)

If Codex has already run Prompt 4, print that. If not, five beats on paper:

1. **Confession hook** (≤ 10 sec): "We are all guilty of it — you sit at the piano, noodle for forty minutes, and nothing you played is a song."
2. **The promise**: one hour, three moves, something that sounds like music.

3. **The 3 moves at the keys:** voicing, rhythm cell, pentatonic over it. Demo each in ≤60 sec of playing.
4. **Artifact CTA:** "This sheet is free — link below, it costs your email, not your wallet."
5. **Newsletter CTA:** "Ahead of Sound Daily — one thing to practice every morning."
No teleprompter. These beats + your hands talking = the video.

4. Record — 40 min

- Phone video, keys angle. If you want a face angle, second phone or skip it — angle B is Phase 1 luxury.
- Talk like the journal rule: what your hand wants to say. Imperfect phrasing stays.
- TWO-TAKE MAX per section. Take 3 does not exist tonight. Pressure-forged, not perfectionist.

5. Cut — 30 min, the light way

- **Clipchamp** (already in Windows 11, light on RAM) or CapCut ON THE PHONE. No Premiere, no DaVinci on this machine.
- Trims only. One title card at the open: white on dark, "FIRST HOUR IMPROV" + AP Music & Audio wordmark.
- Export 1080p (not 4K — this machine will hate 4K and nobody learning chords needs it).

6. Metadata — 10 min

- Title: `Improvise Your First Piano Thing in One Hour — No Sheet Music`
- Description: 2-line hook (the confession), artifact link placeholder to apmusic@audio.com email capture, 3 hashtags (`#pianoimprov #learnpiano #musicproduction`)
- No AI-voice disclosure needed — every voice in this video is yours (and note that: it's a differentiator)

7. Upload — 10 min, UNLISTED

- It ships when the site is live (Codex Prompt 1 → glance → Prompt 2). If the site isn't ready tonight: unlisted stays up, loop closes tomorrow, zero shame.

Shutdown checklist (2 min)

- [] Artifact photo + raw footage copied into `the-brain/sources/` and `funnel/artifacts/` once the repo tree exists
- [] Whisper-base transcription queued overnight (optional; becomes script + blog source material Tuesday's Delta)
- [] Sunday ingest event will catch anything you forgot

What this version removed and why

OBS → replaced by phone + Xbox Game Bar (Win+G) if screen capture is ever needed

Local XTTS/ollama → gone entirely; voice = you, generation = remote

4K anything → 1080p ceiling on this hardware

Same-night publishing → unlisted + gate, per Law 2
